Re: 2025 Micro Surfacing Program: Ralumac

Dear Resident:

This letter is to notify you that Upper Dublin Township’s 2025 Micro-Surfacing Program is scheduled to begin, weather permitting, on Monday, July 21, 2025. The work will be performed by Asphalt Paving Systems of Hammonton, New Jersey.

Door hangers will be posted two (2) days before the scheduled paving. Temporary “No Parking” signs will be posted at least three (3) days in advance.

The tentative schedule is provided below. Please visit the Public Works page frequently for the most current updates to this schedule.

***The following streets are scheduled for Ralumac Micro-Surfacing:***

STREET	FROM	TO	RALUMAC RE-SURFACING
Chase Circle	Barton Road	Cul-de-sac	7/21/2025
Crosby Drive	Pinetown Road	Dillon Road	7/21/2025
Manor Place	Garden Road	Mill Road	7/21/2025
Patricia Avenue	Brentwood Drive	Anbury Lane	7/21/2025
Scott Lane	Camphill Road	Dead-end	7/21/2025
Church Street	Trinity Place	Highland Avenue	7/22/2025
Herold Court	Thornbury Lane	Cul-de-sac	7/22/2025
Holmes Road	Purdie Lane	Bell Lane	7/22/2025
Hutchins Drive	Butler Pike	Cul-de-sac	7/22/2025
Trinity Place	Bannockburn Avenue	Dead-end	7/22/2025

Although your street may not be paved until later in the day, the contractor typically begins work at 7:00 AM. Residents are strongly encouraged to move their vehicles out of driveways and off the street before this time.

Please note, if you need to enter or exit your driveway while work is in progress, especially when it is being done directly in front of your house, you may experience delays of several hours to allow the material to properly set. If you have any unusual circumstances that require special consideration, please contact the Upper Dublin Township Public Works Department as soon as possible.

Township inspectors will be on-site to monitor all work. The contractor and the Township will do everything they can to reduce inconveniences to our residents during this paving project. Your patience and cooperation are greatly appreciated.

***About Ralumac Micro-Surfacing***

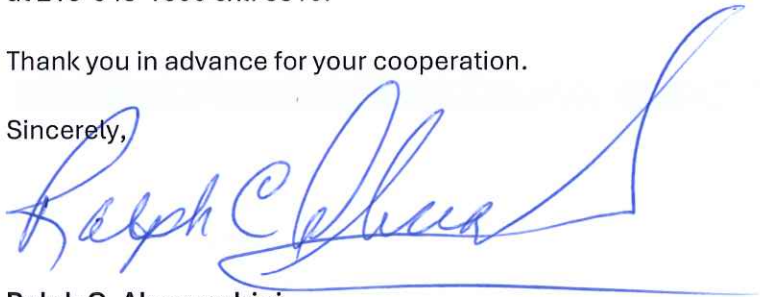

**Ralumac® Micro-Surfacing is a cost-effective preventive maintenance technique for renewing surfaces and protecting pavements.** A quick, economical surface treatment for asphalt and PCC, micro-surfacing provides a smooth, black, highly textured, and durable pavement surface.

Ralumac micro-surfacing is applied by contractors using self-contained mixing and laying equipment. The equipment continuously blends the separately loaded components in a job mix formula. It can be applied in a thin lift, it sets quickly, and the road can be reopened to traffic in about an hour. When applying the Ralumac to the road surfaces, the contractor must overlap his paving passes to get full coverage. Depending on the width of the street, two or three passes may be required. **This process causes ridges to appear at these overlaps.** However, as the traffic action kneads the material, closing up the surface, rendering it virtually impervious. **The traffic will wear down any irregularities in the paving surface and will smooth them out in a relatively short time.** Please be advised, therefore, that this road application will not look like a road that is milled and overlaid. It will leave a gritty appearance until the traffic wears down the material and smooths it out. This is perfectly normal. Townships use micro-surfacing as part of their preventive maintenance programs, and for rut filling and texturing their moderate to heavy volume roads--over both asphalt and concrete pavements. **A successful Ralumac micro-surfacing project can last from 6 to 9 years, depending on the application and project conditions.**

If you have any questions, please feel free to contact Rebecca Barrett (Public Works Administrative Assistant) at 215-643-1600 ext. 3810.

Thank you in advance for your cooperation.

Sincerely,

**Ralph C. Alessandrini**  
Public Works Director
